

dukane | precast - STORM WATER SYSTEMS

Features & Benefits of our Storm Water Management System

- Each Project is Customized to specific site conditions.
- The innovative Dukane *double wall* system is filled with concrete to form a precast/cast-in-place hybrid structure. The larger the tank, the greater the savings.
- Our system can be placed as a water tight system stopping un-wanted infiltration in combined sewer areas.
- Longer, open spans (30+ feet are common) allows for convenient cleaning & maintenance when required.
- System can accept concrete topping placed directly on the lid, providing a concrete parking wearing surface.

Do you need help designing a storm water management system for your next project? Or, do you simply want to learn more about this exciting new water retention solution? Please contact your Dukane Precast sales representative today.

*Dukane DELIVERS for you
